Megawide and the Gaisano Group Top-off Taft East Gate Phase I

Cebu City, Philippines – Engineering and infrastructure conglomerate Megawide and the Gaisano Group celebrated the topping-off ceremony of Taft East Gate Phase I on the project’s 10th level at the height of 32.2 meters. Taft East Gate Phase I is a mixed-used, 43-storey building located in Cebu City.

“Megawide is proud to be working with the Gaisano Group for the very first time. This is the beginning of a strong partnership between our two companies and Megawide is committed to delivering the highest quality of engineering to meet their standards,” said Eric Tan, Megawide’s Deputy Head of Construction.

Megawide is using proprietary automatic climbing systems for this project, which makes construction of time-consuming structural elements like the shear wall faster and more efficient. Structural elements of Taft East Gate Phase 1 will also be built using Megawide precast.

“The technologies that Megawide applies to its construction projects have a huge impact not just on speeding up progress but also delivering greater quality overall,” said Tan. “We continuously innovate our methodologies so that we can deliver better value for our clients and pursue our vision of a first-world Philippines,” he continued.

Megawide is one of the most innovative infrastructure and engineering companies in the Philippines. Publicly-listed since 2011, Megawide is the private partner for infrastructure projects such as the Mactan-Cebu International Airport (MCIA) and the Paranaque Integrated Terminal Exchange (PITX). In 2012, the company established Megawide Corporate Foundation, Inc., a non-profit organization focusing on social development projects.
